

Finished Installation of the **Adjust-A-Grate Security Kit with Quick Release** (highlighted in yellow)

Pictured with Adjust-A-Grate and Adjust-A-Grate Window Well Escape Ladder.

\*Actual Product is NOT yellow

- ✓ Easy for Children to Release
- ✓ Installs in Minutes
- ✓ No Drilling Necessary
- ✓ No Special Tools Needed

# HOW TO MEASURE YOUR WINDOW WELL

Measure from the concrete foundation below the window to the opposite wall of the window well. You will be measuring perpendicular to the window, not parallel.

Well Projection	Well Depth	Model to Use	Compatible Grate
Less than 22"	18"+	<i>Please Call Us</i>	<i>Please Call Us</i>
22" - 26"	18" - 72"	SK6	6-Loop Models
29" - 33"	18" - 72"	SK8	8-Loop Models
34" - 38"	18" - 72"	SK9	9-Loop Models
37" - 40"	18" - 72"	SK10	10-Loop Models
More than 40"	18" - 72"	SKC*	SKC*

*\* Model SKC is designed to work inside window well openings that are too large for our standard tension bar Security Kit Models. This security kit model includes no tension bar, you will need to place your own device at the bottom of the well to attach the security cable to. We have found that an auger anchor, typically used for manufactured home tie-down or extra-large dog tie-out (18" or longer), works well for most customers, ensuring that the eyelet where the quick release can connect to the anchor has a minimum inside diameter of 1 in. and the metal is no more than 3/8 in. in diameter.*

**Can I use the Security Kit with a non Adjust-A-Grate Window Well Cover?**

*The security kit has been engineered to specifically attach to Adjust-A-Grates, however we have heard from numerous customers who have successfully modified the way the security kit attaches to different styles of grates and have included instructions on how to complete this.*

*Please note that hardware to adapt the Security Kit for use with a non Adjust-A-Grate brand grate is not included and must be purchased separately.*
